The host cell also contains a second heterologous polynucleotide encoding a secretory polypeptide to facilitate the secretion of the expressed polysaccharase. The recombinant host cell is useful for producing polysaccharase which is useful for enzymatically degrading oligosaccharides such as lignocellulose, hemicellulose, cellulose, pectin or their combinations, and fermenting the product to ethanol, by simultaneous saccharification and fermentation processes. The present sequence is encoded by an integration vector which was introduced into cells to generate recombinant host cells. The vector contains a surrogate promoter from Zymomonas mobilis, the celz gene from Erwinia chrysanthemi, resistance markers bla and tet, and Klebsiella oxytoca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is given in a specification relating to a recombinant host cell suitable for simultaneous saccharification are fermentation. The host cell contains at least one heterologous polynucleotide encoding a polysaccharase under the transcriptional

CC (IdEA) systems that comparise a fusion sequence that encodes for a CC circularly permutated, interaction-activated proteins that reassemble to CC form functionally reconstituted marker proteins which produce a detectable signal upon the association of two oligopeptides, or upon CC simultaneous association of two oligopeptides with a third oligopeptide. CC The marker protein is preferably a type A beta-lactamase, especially TEM-CC 1 beta-lactamase of Escherichia coli. The oligopeptide is a member of a CC proteome library selected from single chain antibody Fortagment library, CC an antibody light chain variable region library and a peptide library and identifying interactions between intracellular as well as ccentrogropration of multiple genetic traits in a host cell. In particular, CC displayed within thioredoxin. The IdEA systems are useful for detecting crincorporation of multiple genetic traits in a host cell. In particular, CC displayes for the discovery and validation of pharmaceutics, collings. Frior systems (e.g. E. coli Dimer Detection System, yeast two-flowers for the discovery and validation of pharmaceutical targets and colings. Frior systems or Selective Infective phage System) require multiple steps between interaction and phenotype, which cause severe loss of efficiency class of efficiency due to high false positive and false negative rates. The present system or selective intracellular proteins in a high throughput system or metabolic or signal transduction pathways, in high crimical colings. The circularly permutated marker proteins in a high throughput steps between interaction of metabolic or signal transduction pathways, in high-throughput mapping of pair-wise protein-protein interactions within and in cell-based sensors for activation or signal transduction pathways, in high-throughput selection interaction. The present sequence is Escherichia coli consultation of interactions of any protein-protein interaction of activation of signal proteins of any cell-based server. Tem the beta-lactam

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a fragment complementation system (I) CC which comprises a first oligopeptide (OPI) containing an N-terminal CC fragment with a C-terminal break point and a second oligopeptide (OP2) CC comprising a C-terminal with a N-terminal breakpoint, in which the C and CC N terminal fragments are both derived from a marker protein (MP) and CC reassemble to form a functionally reconstituted MP. Methods from the CC present invention are used for monitoring the occurrence of protein composed from the compression of the compression of the composed from the CC protein interactions in a sample, identifying oligopeptide interactions composed from the compo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
The invention describes a fragment complementation system (I) comprising CC a first oligopeptide having an N-terminal fragment with a C-terminal CC break-point, and a second oligopeptide having a C-terminal fragment with CC a N-terminal break-point, where the N-terminal fragment and the C-creminal fragment each are derived from a marker protein and reassemble CC to form a functionally reconstituted marker protein. (I) is useful for Selecting simultaneous incorporation of multiple genetic elements into a CC compound in a host. The method described is useful for identifying a Second oligopeptide to which a first oligopeptide binds, involving co-cexpressing the first and second oligopeptides. Binding of the first CC oligopeptide to the second oligopeptide results in the functional CC expression the occurrence of protein. The method is also useful for conitoring the occurrence of protein. The method is also useful for identifying oligopeptide interactions between two different proteomes; CC identifying oligopeptide interactions between two different proteomes; CC identifying epitopes that bind to an immunoglobulin variable region. (I) or an expression casette (II), encoding a selectable N or C-terminal peptide, is useful for identifying interactions between an extra cellular command of a transmembrane protein and a polypeptide, where the CC inhibit phosphorylation-regulated cell protein, preferably CD40. (I) or confidence in the cell protein in transducers. (I) or confidence in the cell protein of compound that confidence in the cell protein of compound that confidence in the cell protein of compound that cell inhibit phosphorylation-regulated cell signal transducers. (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  25-MAY-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            regulatory DNA sequence linked to a beta-lactamase gene can be used fenzyme prodrug therapy. Expression of the beta-lactamase in a targett cell allows conversion of a prodrug into an agent toxic to the cell freatment of cancer, viral (e.g. HIV) infection or inflammation. Secretion of the enzyme has the advantage of increasing neighbouring
                           The intracellular form (AAW18680) of TEM beta-lactamase is expressed by pCMV-delBL (AAT70311) in which a PCR-amplified beta-lactamase coding sequence, minus the signal sequence, is placed under control of the intermediate/early promoter of cytomegalovirus. Intracellular beta-lactamase constructs, placed under control of promoter/enhancer elements
                                                                                                                                                                                                                                                                                                    DNA construct for gene-directed enzyme prodrug therapy of lung cancer comprises lung- or neuroendocrine-specific promoter controlling
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     20-NOV-1995;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          29-MAY-1997

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
```

The expression constructs pRNH127 and pRNH155 contain identical sequences but were constructed using different strategies (see AAQ36498). The constructs comprise exons 2-7 of human CYP1A1 gene under the control of the inducible mouse metallothionein (MMT-1) promoter. The constructs also contain an open reading frame in the opposite orientation to the cytochrome P450 exons. This ORF encodes ampicillin resistance. The constructs are suitable for transformation of human fibroblasts derived from the xeroderma pigmentosum group A. Cultures of the transformed fibroblasts can be used to test substances for mutagenicity. The presence

pCMV-BL (AAT29220), in which the beta-lactamase coding sequence is under the control of the intermediate/early cytomegalovirus promoter. Beta-lactamase delivery to mammalian cells confers sensitivity to cephalosporin prodrugs. Liposomal DNA/5-fluorouracil prodrug combinations resulted in s.c. tumour regression in mice bearing A549 tumours. Survival of mice bearing human large cell lung H460 intrathoracic (i.t.) tumours was increased upon i.t. injection of the secretory beta-lactamase DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of the inducible cytochrome P450 gene allows metabolism of the substance to mutagenic metabolites. (Updated on 10-MAR-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gene therapy; gene directed enzyme prodrug therapy; GDEPT; virus directed enzyme prodrug therapy; VDEPT; prodrug activation; cytotoxic; cytostatic; cancer; tumour; retrovirus; vector;

cytochrome P450IAI (CYPIAI) expression construct. Two clones, pRNH127 and pRNH15, were isolated by different methods and which both had the same sequence. The CYPIAI construct is used in assays to test for cytotoxicity of humans to a chemical. The method comprises exposing human fibroblast cells normally not including any cytochrome P450 activity to potentially toxic chemicals. The cells having been transformed to express cytochrome P450, under the control of a controllable promoter through the CYPIAI gene, upon exposure to the chemical in vitro. The chemical is metabolised intracellularly into a cytochrome metabolite by oxidation within the
                                                                                                                                                                                                                                                                                                                                                    Testing chemicals for cytotoxicity to human by using recombinant fibroblasts transformed with control of inducible promoter.

                                  Escherichia coli beta-lactamase (AAW16635), lacking the signal peptide, is the expression product of a molecular chimaera, designated pCMV-delBL (AAT66738), in which the beta-lactamase gene is under control of the CMV intermediate/early promoter. Vectors consisting of a transcriptional regulatory DNA sequence linked to a beta-lactamase gene can be used for enzyme prodrug therapy. Intracellular expression of the beta-lactamase in a targetted cell allows conversion of a prodrug into an agent toxic to the cell for treatment of cancer, viral (e.g. HIV) infection or

                  The secreted form (AAW18679) of TEM beta-lactamase is expressed by BL (AAT70309) in which a PCR-amplified beta-lactamase coding sequenglaced under control of the intermediate-learly promoter of cytomegalovirus. Secretory beta-lactamase constructs, placed under control of promoter/enhancer elements of lung-associated protein control of promoter/enhancer elements of lung-associated protein.
                                                                                                                                                                                               DNA construct for gene-directed enzyme prodrug therapy of lung cancer comprises lung- or neuroendocrine-specific promoter controlling \cdot expression of prodrug-converting enzyme.
                                                                                                                                                                                                                                                                                               N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Escherichia
